

Manage your risk, build your edge

Beacon by CWAN offers a unified, cross-asset trading and risk management solution for investment and risk teams to modernize infrastructure, streamline operations, and focus on developing strategies that drive a competitive edge.

Beacon's transparent, cloud-native platform provides pre-built trading and risk applications with the flexibility to build and scale custom risk models and analysis outputs with unparalleled speed and efficiency.

We enable any investment management firm to:

Model risk faster

Using integrated frameworks for all asset classes as a foundation for customization.

Leverage the power of AI

Connect your own LLMs as well as leverage Beacon's embedded agentic AI capabilities, including over 30 ready-to-deploy agents.

Understand every input

Fully transparent source code means you and your stakeholders understand how every model was built and every valuation was calculated.

Be flexible, inside and out

Whether it's across pods and portfolios, diverse asset classes, or multiple manager allocations, you tailor your risk analysis to your needs.

Put security first

Leverage bank-grade security protocols within your own private cloud instance.

Manage uncertainty

Shock your entire portfolio with Beacon's integrated scenarios or create your own, so you always understand your future cashflows.

Support complexity

Manage exposure for the most sophisticated assets, including securitized debt and swaps as well as mortgage and private loans.

Beacon by CWAN lets you focus on risk management, not technology management.

We enable the entire investment ecosystem:

Asset managers

Get the solution they need to support increased demand for clarity and complexity from institutional clients.

Hedge Funds

See better intraday pricing and risk transparency, driving better decision making with pre-trade and post-trade analytics.

Asset owners and allocators

Can model even the most complex assets to power better decisions.
